

CIMSOURCE Digital Tool Services – Where digital meets precision

CIMSOURCE is a privately held German company with subsidiaries in the US and Japan. Born in the age of CIM (Computer Integrated Manufacturing), the goal was to become the Source for CIM. Today CIMSOURCE facilitates Tooling 360°, comprising every aspect from cutting tool data generation and tool data distribution to deployment for the E-commerce- and the CAM-channel.

Tooling 360° is rooted in the web-based search engine and tool data repository of ToolsUnited. More than 5.000 users access ToolsUnited daily to search among 1,2 Mio SKUs, download 3D data for CAM, nc-verification or tool management and are guided to local distributors for instant sourcing.

ToolLink simplifies tool data sourcing for manufacturing companies with requirements that go beyond what ToolsUnited may provide, e.g. for customized tools. How does ToolLink help? It puts the data clean up and enrichment process into the hands of the tool suppliers.

The SalesSupportServer (3S) is key for the digital transformation of tool suppliers. As the single source of truth, tool items are managed in the 3S database and be prepared in a bite-sized format for customers. 3S may be complemented with a Web UI, making it the myToolsUnited for any supplier or as a source for CAM data for their website.
